To Whom It May Concern,

Invenergy drives innovation in energy. Powered by decades of entrepreneurial experience and unparalleled execution, we solve the energy challenges facing our customers and communities. We provide power generation and storage solutions at scale around the world to create a cleaner energy future.

Linear transportation infrastructure – whether highways, railroads, pipe or transmission lines – are necessary to create a consistent and orderly flow of people, products and electrons across our country for domestic use and exportation. This infrastructure is vital for farming operations for crops and wind alike. The movement of products from one place to another is a key component to growing our individual and collective prosperity.

Given the importance of regional transportation connectivity, Invenergy supports sensible investment in retrofitting, repurposing, and greenfield development of linear infrastructure across the United States, including the revitalization of the Tennessee Pass Line by Colorado Pacific Railroad, LLC.

Invenergy confirms it has a wind energy lease in place with KCVN, LLC and hopes to develop a renewable energy facility on the property.

Sincerely,

A handwritten signature in blue ink, appearing to read "J. Williams".

James Williams
Vice President, Renewable Development
