Good morning, Crystal –

Thank you for the figures that you sent yesterday. It appears that the figure titled “MKCRR-Tracks & Structures-V-1_ST-01-McKeesport” may be the most informative of the material provided for the purposes of identifying what the “MCR Track” consists of. If you could please verify the following statements, while referencing the attached marked-up version of that figure (because of the poor resolution of my scanned copy, you may need to refer to the original figure as well, particularly to delineate track numbers):

- The MCR Track is represented by the bolded black lines on the figure, which I have further highlighted in green.
- In greater detail, the MCR Track includes the following single and multiple track segments (in ascending numerical order): Tracks 98, 132, 138 through 142, 161 through 167, 172, and 784.
- The MCR Track does NOT include the two gaps (where no bolded black lines are present, and further highlighted in yellow) between the eastern terminus of Track 172 and the western terminus of Track 784, and the eastern terminus of Track 98 and western terminus of Track 132.
- If the MCR Track does exist in the two “gaps” noted above, please confirm that these gap segments are single tracked.

Please let me know if you have any questions.

Thanks,

Dave
