I STRONGLY urge you to choose the no-action alternative for the proposed Uinta Basin Railway. The proposed railway would do irreparable harm to our region's air, water, land and wildlife and should not be built. This draft environmental impact statement totally fails at what it's supposed to do: assess the harm this oil railway could have on the environment, wildlife and nearby communities and thus BREAKS FEDERAL LAW! At MINIMUM, the scope of this project REQUIRES an Environmental Impact Statement, to truly assess all the impacts on State and Federal Heritage Lands.. The new production resulting from the railway expansion - potentially four times the current amount - will contribute irreversibly to increased greenhouse gas emissions. Our climate is already at a tipping point, so we need to sharply reduce fossil fuel use instead of expanding it. The railway's emissions will also further pollute the air in the Uinta Basin in Utah, which already exceeds federal standards because of existing oil and gas development. The short-term economic gain generated by this project would be MORE than ADVERSELY OFFSET by the Long-Term damage to our Natural and Cultural Heritage Lands and the World's Climate. Traversing roadless areas, steep canyons and rugged terrain, the railway will degrade more than 10,000 acres of habitat for migratory wildlife and will harm important habitat needed by the rare greater sage grouse and the endangered Barnaby ridge-cress. The preferred project route would run almost the entire length of Utah's Indian Canyon Creek, crossing and degrading more than 400 streams and important wetlands along the Price River - harming the semi-arid state's precious perennial waterways. In Colorado, the project could mean reopening a rail line through scenic Tennessee Pass, despoiling scenic lands and wildlife habitat to get oil trains to the Gulf Coast. Mile-long oil trains could rip through sensitive areas like Browns Canyon, a rugged 22,000-acre national monument designated in 2015 to protect one of the wildest stretches of the Arkansas River. Finally the Uinta Basin Railway would harm people who live and recreate in both states. Landowners in Utah's Argyle Canyon and nearby off-grid canyon communities fear the disruptive noise, traffic delays, and clouds of diesel smoke oil trains will bring along the proposed routes - not to mention the significant potential for accidents, derailments, spills and even sparks that could ignite disastrous wildfires. And people in Colorado won't escape the air pollution drifting downwind from Uinta Basin, even as the railway rips through a national monument and other scenic areas supporting outdoorsy tourism many locals rely on for their livelihood. This project is an unacceptable threat to the health, safety and well-being of wildlife, humans and the planet. Please choose the no-action alternative. We will be watching the actions you take and decisions that you make regarding this project!
