**Subject:** Request for Technical Information in EP 711

Good afternoon,

The STB's Office of Economics requests additional technical information from the Association of American Railroads ("AAR") regarding the February 14, 2022 supplemental comments it filed in STB Ex Parte No. 711 (Sub-No. 1). AAR attached to those supplemental comments the Verified Statement and Written Testimony of Michael R. Baranowski & Nathaniel S. Zebrowski ("Baranowski & Zebrowski V.S."). The workpapers underlying the Baranowski & Zebrowski V.S. rely upon specific software versions and dependencies. Please provide the following information related to the software used to develop AAR's evidence:

- 1) The Microsoft SQL Server build. For example, SQL Server 15.0.4198.2.  
See: <https://support.microsoft.com/en-us/topic/kb4518398-sql-server-2019-build-versions-782ed548-1cd8-b5c3-a566-8b4f9e20293a>
- 2) A "requirements.txt" file that specifies the python build and also package versions AAR relied upon in its evidence.  
See: [https://pip.pypa.io/en/stable/user\\_guide/#requirements-files](https://pip.pypa.io/en/stable/user_guide/#requirements-files).
- 3) Transact-SQL scripts used to import all flat text files into the database engine. Please also include the scripts used to configure the databases and tables (e.g. the schema and data types).

Thank you very much. Our plan is to place this note, and your response, into the STB's docket in the matter.

Regards,

William Brennan, PhD  
Chief Economist & Director
