contact-message : Speaking from the Environmental Justice Communities issues associated with transport that emissions from combustion of fossil-derived fuels, transportation systems contribute to degraded air quality as well as a changing climate and global warming. Trains is harmful to air pollution, water pollution, air equity, noise pollution, toxic waste it will be hauling. There will need to build road-rail parraell infrastructure. Trains will be toxic to ecosystems and negative impacts on human health and welfare of U.S. citizens. Train emissions carbon dioxide, Nitrogen Oxide, Particulate matter, carbon monoxide and volatile organic compounds and high greenhouse emissions through multiple direct and Indirect interactions..They cannot sit the trains on the tracks of already burdened and marginalized communities that's dealing with legacy pollution.
