New calf just born on Sulphur Creek - Lampasas. Train would go through this wooded area - where will cattle go? Where will they water - the line would cut off all access to Sulphur Creek and our livestock watering.

Please help us!

Adam,

It was a pleasure to speak to you today concerning the proposed rail line from Burnet to Lampasas by Texas Materials Group. I was able to file the Environmental Comment. I'm on the STB website but I don't see how to access information on this project. You mentioned searching EO 4000?

Any help will be appreciated.

We are working with national, state and local officials to get information out - as you probably read in my attached letter this is very, very upsetting for landowners. It is not right that a private company (an Irish company nonetheless) can break the backs of central Texas landowners for profit.

Thank you for your assistance,

Tina Riojas
