The GLB Railroad will be a hazard in several ways in our area. First of all is safety. With so many trains going by, how are emergency vehicles supposed to cross roads in time to save lives or get to fires quickly? This is a farming community, farm equipment is constantly going down the road. How are they supposed to get safely across the roads with trains going by every few minutes? The safety of children is a very big concern. The railroad would be close to the school. It would be a hazard for school children with school busses crossing the tracks with trains coming every few minutes. The value of our property will definitely go down. Who wants to live in an area that has 70 train per day go by carrying hazardous wastes? Certainly not any of us! The noise factor is also an issue. This is rural area where farm animal are. The noise will be very disturbing to them.

To sum it up, no one is going to benefit from this except the railroad? How can you allow a private interprise come in and destroy precious farmland, our beautiful state park and put people's lives in danger?

If this goes through it will be a legacy of destruction, not the wellbeing for the commonwealth of the people.
