I strongly oppose the GLB Railway Project! It would be disastrous to our country lifestyle in so many ways. Trains traveling through our areas would be noisy and disruptive to say the least. This fact would cause all of our property values to drop tremendously. If a train carrying toxic material was to have an accident there would be potential for death, sickness and damage to our water supply, air and soil. Please keep in mind that Wisconsin, Illinois and Indiana have some of the most fertile soil in the world. Farmers in these proposed areas would be hurt both financially and emotionally, not just if there was a spill or leak, but also because of train tracks crossing their land and disrupting their farming operations. Additional railroad crossings would slow emergency responders, school buses, people driving to work, etc. I suggest that improving existing operational railways and abandoned railways is a much more logical solution. In closing, it is just wrong to destroy thousands of peoples' lives just for the benefit of a small group of wealthy individuals!
