This railroad project is nothing but an unnecessary project to grab land for profit. About 3 years ago I purchased my dream house on a 5 acre lot in a good school district. If approved, the plan would go right across the road and ruin the peaceful quiet area and greatly devalue my home. Furthermore it would be disruptive for the school system and bus routes. Our kids already have to catch the bus before 6:50 am and the school has already stated if built the busses would have to run even earlier to accomodate possible train delays and bus rerouting. There is an existing rail line that already runs nearly parallel from southern Rockford pretty much to the destination near Janesville that is just about 5 miles to the east of the proposed route. In the unlikely event this project is deemed necessary, why not tie into that little used line? Lastly, recent reports that they also want to build a private tollroad following the proposed line forming a 2,000 foot wide transportation corridor is especially alarming and not needed. I90 is already available and has light to moderate usage from Elgin to the Wisconsin state line.
