Part of
Public Record

A public necessity review must include an applicants ability to operate the business they are proposing. Great Lakes Basin Railroad was unable to complete their environmental review on time. Great Lakes Basin was unable to submit their official application accurately. Great Lakes Basin has been working on this project by their own admission for over 5 years. It is clear Great Lakes Basin does not have the skills to operate a business of the size they hope to become. Great Lakes Basin must be judged on their submission as they have no other business experience, based on their submissions they are unable to operate a successful business and therefore their project must be denied. Please issue an immediate no build ruling.
