Part of
Public Record

This proposed rail line has no backing from any of the major rail companies. It will destroy hundreds of acres of arable farmland and conservation areas, isolate portions of our community from prompt fire and ambulance service, and possibly cut off several local roads. making it very difficult for residents to get to their properties. Many farms will be cut in half by this project, some will become landlocked with no access except to cross the rail line at improvised crossings.

There is also a planned, and under construction, solar and steam electric co-generation plant and substation directly in the path of the proposed route, and a planned 345 kV dual circuit transmission line will also parallel the proposed right of way.

All investors and other involved persons and corporations need to be publicly named. Any attempt to hide this information is a disservice to the public.
