As a long standing 'eminent domain' supporter, I have struggled with GLB's efforts to build this rail line in my back yard...while it may sound self-serving, I have decided that this proposal has very little merit in regards to it's impact on the communities it with (nearly exclusively) affect negatively. Democratic Governments such as ours certainly have a vested interest in strong infrastructure, but this proposal offers little to improve our infrastructure, but instead almost exclusively enriches a very select group of private citizens...nothing seems to me to be further from our democracy then serving the few, while disadvantging the populace.
