Lou -

HDR is heading out to the field on Monday, March 31, to begin the wetland delineations and mapping for the two potential siding extension sites, two potential new siding sites and the Flatrock River Bridge reconstruction site. HDR has completed the necessary arrangements and coordination with L&I staff for this field work and activity within L&I's right-of-way.

We want to confirm that the areas to be looked by HDR in the field will consist of the following (based on our current understanding of the proposed project):

- All four siding sites are located on the east side of the existing L&I rail line. Therefore, the wetland delineations will be conducted on the east side of the L&I rail line and within the existing L&I right-of-way (Our understanding is that the L&I right-of-way is approximately 60 feet wide, 30 feet either side of the centerline of the tracks).
- The wetland delineation study area at the Flatrock River bridge site will be defined as a 200-foot buffer around the existing bridge (that is, the area of potential construction disturbance during bridge replacement would not extend more than 200 feet from the bridge in any direction).

Please verify this information with CSX today, or as necessary contact Rose Hargrave at HDR by phone at 402-399-4881.

Thanks,

Dave
