Jennifer -

Attached is the applicant's presentation and assessment of the "Mac East Variant." This assessment represents a preliminary review of potential environmental impacts from the applicant's perspective. This assessment also pre-dates the more refined construction footprint analysis that the STB is providing in the Final EIS. As Alan Summerville mentioned on today's call, the STB has independently verified applicable information from the applicant, and the environmental assessment of the Mac East Variant in the Final EIS will be substantially more detailed, and comparable to the other rail line segments

Thanks,

Dave
