Hi Rachel,

While the IPM platform has moved to a new format, there are no readily available substitutes for the files that you are referring to (.DAT, System Summary Report, .RPE, .CAR, .TAC) because most of them (System Summary Report, .CAR, .TAC) were specially prepared by EPA to document their runs. There is no-one-for-one corollary file now being produced. The information contained in those files is not part of a standard IPM output and was not generated for this analysis. We also don't have a stand alone technical document. We do have a user's manual, but it is proprietary because ICF uses it for other projects.

Thanks,
 Danielle

Hi Danielle,

I just wanted to check in with you about the IPM model input and output files. Do you think we will be able to get those in the new format? The specific files are important because they tell us about specific model settings as well as about the input and output variables. Do you have some sort of stand-alone technical document? If so, could you provide it?

Thanks!
 Rachel
