Hi Rachel,

The files you requested with the file extensions ".DAT, System Summary Report, .RPE, .CAR, and .TAC" are no longer used or created by IPM as the IPM platform has moved from a Fortran based system to a DotNet format. However, the relevant information that used to be in these files has been provided in response to the list of specifically requested data, or the summaries can be created by the provided data.

With respect to the CoalDOM input and output files, the coal supply curves that are most pertinent to the analysis, namely the Powder River Basin coal supply curves, have already been provided in the file "Tongue River Requests Data Set 1 v2 2015-08-18.xlsx" in the worksheet titled "Coal Supply Curves." The remaining coal supply curve data is data that is proprietary to ICF.

Thanks,
Danielle

Hi Kenneth,

The CD did arrive; thank you for sending that over. It contains certain plant level output data for each of the scenarios, as well as certain input data for variables that I had specifically requested on my list.

However, I had also asked for the detailed IPM input and output files for the scenario runs with the following file extensions: .DAT, System Summary Report, .RPE, .CAR, and .TAC. I also asked for the CoalDOM input and output files. I've never worked with those particular files, so I can't be sure of the extensions. I would still like very much to be able to review those files. Are you able to send them as well?

Thanks,
Rachel

I wanted to give you a heads-up that a CD-ROM with modeling data you

requested has been sent by Fed Ex. Delivery is scheduled for Friday.
Thanks.
