All,

I am following up with you regarding the Multiple Property document for the IDSMP and the agreements made between ARRC and SHPO at our November 18 meeting. Cathy – I am including you in this e-mail as you had to drop off the call just before the meeting ended, and I want to be sure you are aware of the agreements made. At our November 18, 2014 meeting, we agreed to the following:

1. OHA staff would provide information to ARRC as to where the draft document does or does not meet the agreed upon scope of work (provided below), and clarify their understanding of the scope of work by the end of November (before Thanksgiving, if possible).
2. ARRC and STB staff would review that information, and we would hold another meeting with all parties (OHA, ARRC, and SHPO) around mid-December to resolve remaining issues so that the document could be finalized by the end of December.
3. OHA would also make suggested edits to the word document to assist in the process. No date was specified for these edits.

I want reinforce that we plan to finalize the document by the end of December. Please let me know the status of items 1 and 3. Assuming you provide item 1 information this week, please let me know what dates/times you are available for a meeting next week (Tues., Wed., or Thurs., Dec. 16-18) so that I can schedule a meeting. Thanks, Barb

Scope of Work agreed to in November 2013

- Introduction (why this document is being drafted, why we are changing the approach from what was presented in the Implementation Plan);
- Brief overview/description of the multiple property (e.g., property name, AHRS number if applicable, identification/brief description of the geographic area/study area, ownership, function/use, associated property types, period of significance, area of significance);
- Summary of consultation and studies done to date regarding the multiple property (primarily including consultation/studies associated with the IDSHD);
- Brief overview of the historic context associated with the multiple property (within the geographic/study area and focused on the period/area of significance) including maps and photographs as appropriate (based on SRB&A 2010);
- Brief overview/description of significance/NRHP eligibility for the multiple property (based on IDSHD significance/eligibility);
- Identification of potential properties within the multiple property listing, and the specific properties that will be addressed in this document; and
- Discussion of associated properties for the multiple property, and features needed to be considered eligible under the multiple property (includes discussion of important aspects of integrity needed to be eligible and how this information applies to associated properties within the APE).
