express some of my concerns with
the Railroad building project proposed.
the scope of this project and the
size of the area affected will have to
be very small, if any, advantage that
will provide the area. Besides closing many
existing many farming practices and water shed
if many rail crossings, and the
of 100+ trains per day (one every $14\frac{1}{2}$ minutes)

it is hard to believe that you and only
you are the entity that can change the course
events in the GLB plan. We the people
the United States seems to be an obsolete idea
our forefathers intended to pass along to us.
Having absolutely no say or meaningful input
the decision that seems to have been already
related and in progress to further we feel
help and our mistrust of the system has
- immensely.

to for Reading if you made it this far
