Sept 15, 2008

I am a resident of the Lake Zurich area and am extremely concerned about the train issue currently under review. There is absolutely no good that will come from this merger for the residents here. Just of all we already have long back up traffic flow, the trains would make it a true nightmare. I moved to Lake Zurich from an area where there were many trains and it was awful. One of the reasons I chose Lake Zurich was because of "minimal" train traffic. Now they want to add all these additional trains that would truly destroy our lives here. What about our home, property values would certainly decline when they are in an extremely congested area. We can't afford this type of catastrophe. Another big concern is access to the hospital, when a patient needs to get to the ER quickly, those train delays will cost some people their lives. In an emergency situation every second counts. Is human life so unimportant that this problem wasn't even considered? These additional trains will cost

the results of the money in many ways. How
much extra positive will people see each
day when they are constantly stopped by these
crowds. There are many valuable answers
here, that create a big issue. Many
people could not get injured and
even worse they could get killed. Again
we are addressing the human life issue.
We really not go to take down from
other check out very thin over here. We
do not want them here. We pay attention
high taxes here and should be entitled
to live in a peaceful, healthy, community,
not be subjected to all that noise,
pollution and destruction of our current
existence.

Please take into consideration how many
people will be adversely affected by this
It should not happen here and I pray
that it won't.

Thank you

Mr. Spike Nelson
