Transcript:

I'm calling in reference to the STB Finance Docket No. 35087. I'm calling to oppose the railway acquisition regarding purchase of the EJ&E Railway by the Canadian National Railroad. I oppose this move because enter of the community because of emergency vehicles that have to cross tracks to get to the sick, and it's kind of impossible to do that when there are trains going back and forth. The noise of the whistles and it's kind of disturbing especially when people need their rest and it'll bring more pollution to our community. We don't need any more of that, we have enough. And there will be more traffic problems and people will be late to school. I don't understand why a foreign country can't pay the cost of their own railway and why we have to pay for it. I also feel that there is no way that the engineers can drive safely because of being sleep deprived, unless there was a derailment or chemical spill or there is people living there. Thank you and please help our community.
