815-439-1290. I think it would be easier for terrorists to enter the country if Canada owns this rail line. We have too much traffic for our roads now with the trucks and terminals and no money in the state. We've had too many illegal immigrants come in this country and they're bankrupting the country and causing all kinds of economical problems and taking away jobs. So there's going to be less money and we're tired of being dumped on by Chicago as their dumping ground and sending everything this way. Also, I think environmentally I notice a lot less of our natural things like birds, and bugs, and everything else over the years with all these trucks and people coming in and it definitely is a safety issue. The area does not want it and I hope the people get their message through. Canada's dollar is worth much more than ours right now, but will that change in a couple of years and then will we be sorry that we gave this rail line up? Railways are a very important part of our heritage, just as the canals are and I think the country should keep these and not sell them to someone else. Thank you for letting me voice my opinion.
