Dear Sir or Madame,

I am writing to comment on the draft EIS/Finance docket 35087.

My understanding is that this draft suggests that Canadian National (CN) would be required to pay only 5-10% of the cost of needed overpasses and underpasses. Especially with the looming economic crisis and potential bailout of billions of dollars by U.S. taxpayers, taxpayers should NOT have to bear the cost of these needed overpasses and underpasses due to CN's desire to change their business practices. **CN needs to pay for these necessary environmental "improvements" themselves—100%.**

There are already insufficient tax funds to fix and improve our local roads for the existing population. Frankfort and neighboring suburbs are rapidly growing, and planning needs to consider population growth (and resulting traffic change projections) 15-20 years in the future. For example, the nearest hospital is ~30 minutes away; if there are no funds for the overpasses/underpasses, this could easily climb to an hour or more. This is about more than local inconvenience—it is about community safety and having the necessary funds to ensure it.

Thank you for your consideration of my comments.
