

Dave Navecky...

I submitted on your website but also would like to send you a copy of what I have sent...

Page 1... 660ft southwest is the elevation.

670ft at the highway.

200ft from the 2 homes.

#3 is a major utility highline.

We have spent \$8000. In tiling on this property.

Water flows southeast at the 4 corners also water flows southwest

Half a mile to the northeast the elevation is at 712ft. in that mile there are 3 railroad crossings

Page 2... water flows to the north at the 680ft and goes west. At the one mile mark north of route 2 it is at 710ft elevation. We have spent \$25000 in tiling. We are getting ready to do a major waterway called CRP through the FSA.

Page 3... water flows northeast. In our tiling on this property we have spent \$3000.

Page 4.. water flows west and have spent \$25000. In tiling.

Personal note.

My wife and I feel that it will affect our health. I have just recently gone through a triple bypass surgery and am very concerned with this railroad being so close to our house. My wife is dealing with Multiple Myeloma Cancer and I am very concerned how this will affect her. My daughter's family lives next door and I am concerned how this will affect their health and with the railroad crossing being at our driveway I am concerned about their drive to school everyday considering they will at some point have to sit at a crossing and wait and possibly be late to school. 3 crossing within a mile is very dangerous for them and all other children driving to school not just them but the school buses that will be sitting at each crossing.

Thank you

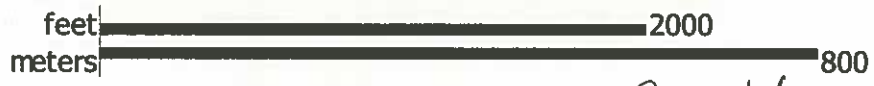

Ronald Hoffman.
