Dear Ms Ghosh

I'm not for this project, I think it will disturb the high quality of life that this area presently maintains. If however, if this project is to go through, I would prefer MCEAA Medina Dam alternative.

It would have less total impact on property and people living in the area. I also have concerns about the diesel tank and other hazardous material being near floodplain areas.

Finally, again the Medina Dam alternative stands out as the preferred route of choice considering all the negative impacts compared to the proposed SGR route through the Quihi Valley historical district.

Yours truly

Dear Ms. Ghosh, EO #34284

I not, for this project, I think it will disturb the ^{high} quality of life that this area presently maintains. If, however, if this project is to go through I would prefer the EAA median dam alt. It would have less total impact on property and people living in the area. I also have concerns about the diesel, fuel and other hazardous material being near flood plain areas. Finally, again the median dam alt. stands out as the preferred choice route of choice considering all the negative impacts that compared to the proposed S&K route through the Quibi Valley historical district.

Yours Truly
Will Gilliam
