

Stop the Tongue River Railroad Coal Project

Dear Surface Transportation Board,

I oppose the construction of the Tongue River Railroad and urge you to reject this misguided project. The draft EIS released on April 17th does an inadequate job considering harmful impacts on Western Montana rail towns that will see additional coal train traffic if the TRR and West Coast export terminals are built. In addition, new carbon emissions that would result from building the TRR mean the project should be rejected on climate change grounds alone. I am especially concerned about the TRR's impacts on:

- ☒ Quality of life in rail line communities affected by noise pollution.
- ☒ Air quality in neighborhoods right next to the rail line (where highly localized impacts will be more severe than on any given town's air shed considered as a whole).
- ☒ Climate change caused by burning coal that would be transported on the TRR.
- ☐ Private property rights infringement and degradation of farmland in rural Montana.

Stop the Tongue River Railroad Coal Project

Dear Surface Transportation Board,

I oppose the construction of the Tongue River Railroad and urge you to reject this misguided project. The draft EIS released on April 17th does an inadequate job considering harmful impacts on Western Montana rail towns that will see additional coal train traffic if the TRR and West Coast export terminals are built. In addition, new carbon emissions that would result from building the TRR mean the project should be rejected on climate change grounds alone. I am especially concerned about the TRR's impacts on:

- ☒ Quality of life in rail line communities affected by noise pollution.
- ☒ Air quality in neighborhoods right next to the rail line (where highly localized impacts will be more severe than on any given town's air shed considered as a whole).
- ☒ Climate change caused by burning coal that would be transported on the TRR.
- ☒ Private property rights infringement and degradation of farmland in rural Montana.

In addition, new carbon emissions that would result from building the TRR mean the project should be rejected on climate change grounds alone. I am especially concerned about the TRR's impacts on:

- ☒ Quality of life in rail line communities affected by noise pollution.
- ☒ Air quality in neighborhoods right next to the rail line (where highly localized impacts will be more severe than on any given town's air shed considered as a whole).
- ☒ Climate change caused by burning coal that would be transported on the TRR.
- ☒ Private property rights infringement and degradation of farmland in rural Montana.

Stop the Tongue River Railroad Coal Project

Dear Surface Transportation Board,

I oppose the construction of the Tongue River Railroad and urge you to reject this misguided project. The draft EIS released on April 17th does an inadequate job considering harmful impacts on Western Montana rail towns that will see additional coal train traffic if the TRR and West Coast export terminals are built. In addition, new carbon emissions that would result from building the TRR mean the project should be rejected on climate change grounds alone. I am especially concerned about the TRR's impacts on:

- ☒ Quality of life in rail line communities affected by noise pollution.
- ☒ Air quality in neighborhoods right next to the rail line (where highly localized impacts will be more severe than on any given town's air shed considered as a whole).
- ☒ Climate change caused by burning coal that would be transported on the TRR.
- ☒ Private property rights infringement and degradation of farmland in rural Montana.

Additional comments: Our dependence on coal must be reduced. It is not a clean energy source to increase production and exploitation.

story

6/8/15

To Whom it may concern—

I live near the railroad tracks so I have experience with the noise, air pollution directly related to the trains. With the increase in rail traffic there is also a concern with safety issues. We have had derailments already near my neighborhood. For our country to work so hard to control and abate air pollution, why actively encourage other countries to use a source of energy known to cause cancer and respiratory ailments in humans? Montana must encourage and explore cleaner energy options to create jobs and bring income into the state.

In closing, I do not support construction of the Tongue River Railroad project.

Yours sincerely,
Donnie Thompson
265 N East St
Missoula MT 59802

ADDRESS DOWN-LINE IMPACTS TO NORTH IDAHO

Dear Surface Transportation Board,

I strongly urge you to choose the "No Action" Alternative described in the draft EIS. Despite STB's assertion that it would examine down-line impacts to affected communities from the TRR, the DEIS does not consider any impacts to North Idaho's rail-side cities. Additional rail traffic that will be generated from the TRR will impact our overall quality of life and I am particularly concerned about the TRR's impact on:

- ☒ Human health and safety (delayed emergency response, increased risk of accidents, noise pollution)
- ☒ Traffic delays
- ☒ Economic impacts (loss of property value)
- ☒ Water and air quality impacts from coal and coal dust release and diesel particulates

Additional comments: THE LIKELY HOLD THAT THIS COAL
WILL BE SHIPPED WESTWARD FOR EXPORT AND THUS
INCREASE RAIL TRAFFIC THROUGH COMMUNITIES IN MT, ID, AND WA.

Name: BRIAN D. LAWSON Email: _____

Phone: 509.447.5510 City, State: NEWPORT WA Zip: 99156

from coal, coal dust and diesel exhaust. These shipments could also bring major threats to our environment, health and well-being if accidental derailments, spills or explosions occur.

If the number of daily fossil fuel shipments increases, the risk of chronic pollution will also increase. Coal dust, coal fragments and diesel exhaust from the train's engines can deposit toxic pollutants into the air and water which build up and accumulate over time.

Increased rail traffic also threatens our safety, delays emergency response and harms our local economy. If a spill occurred over our deltas or other recreational waterways, its residues would persist in the sediments for generations to come.

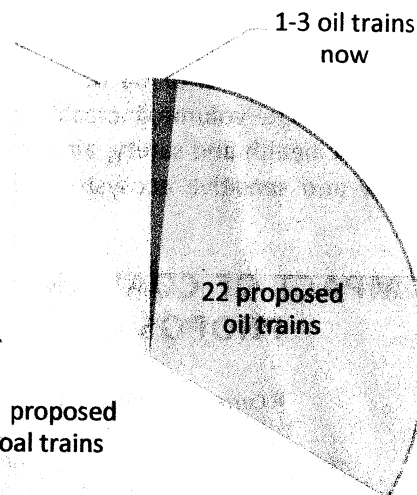

Despite these significant risks to our well-being, North Idaho will see **no economic benefit** from increased shipments of fossil fuels through its communities. In fact, **tax payers will foot the majority of the bill** for upgrades to rail crossings and other impacted infrastructure.

Rail

North Idaho

Shipments through N. Idaho

coal and oil trains

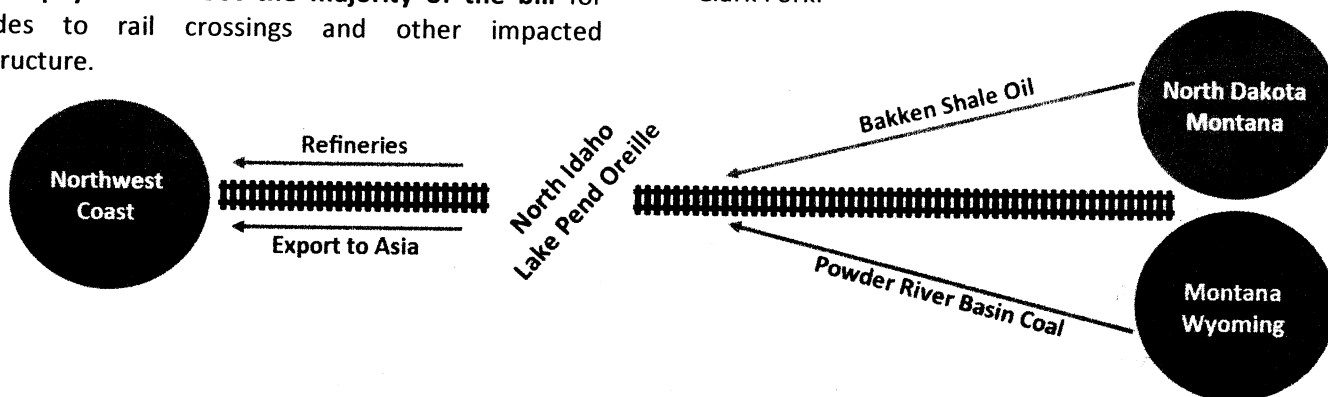

Statistics courtesy Power Past Coal and ForestEthics

Where do these fuels come from?

Coal and oil are mined from fossil fuel-rich basins across the interior of the US and Canada. Coal is primarily mined in the Powder River Basin of MT and WY, while crude oil comes from the Bakken Oil Fields of ND and MT.

Where is the coal and oil going?

Once mined, coal and crude oil are generally transported to the refineries and export facilities in coastal WA and OR. To get there, these fuels must travel by rail through North Idaho's rail-side communities, such as Sandpoint, Hope and Clark Fork.

Fossil Fuels by Rail

Coal and oil shipments through North Idaho

Coal and oil companies have submitted numerous proposals that would increase the amount of coal and volatile crude oil shipped by rail through North Idaho. If **approved, these fossil fuel shipments would more than double our current total rail traffic.**

This fact sheet shares a few important statistics, and highlights the risks these proposals could bring to our communities.

A no-win for North Idaho

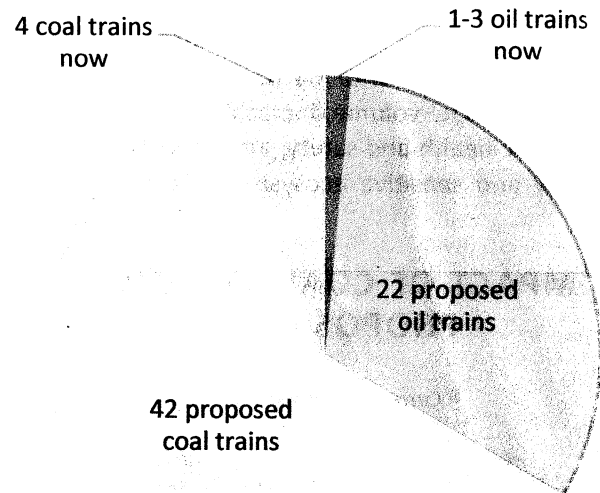

Rail shipments of coal and crude oil pose inherent long-term risks to North Idaho, including chronic pollution from coal, coal dust and diesel exhaust. These shipments could also bring major threats to our environment, health and well-being if accidental derailments, spills or explosions occur.

If the number of daily fossil fuel shipments increases, the risk of chronic pollution will also increase. Coal dust, coal fragments and diesel exhaust from the train's engines can deposit toxic pollutants into the air and water which build up and accumulate over time.

Increased rail traffic also threatens our safety, delays emergency response and harms our local economy. If a spill occurred over our deltas or other recreational waterways, its residues would persist in the sediments for generations to come.

Despite these significant risks to our well-being, North Idaho will see **no economic benefit** from increased shipments of fossil fuels through its communities. In fact, **tax payers will foot the majority of the bill** for upgrades to rail crossings and other impacted infrastructure.

Daily rail shipments through N. Idaho coal and oil trains

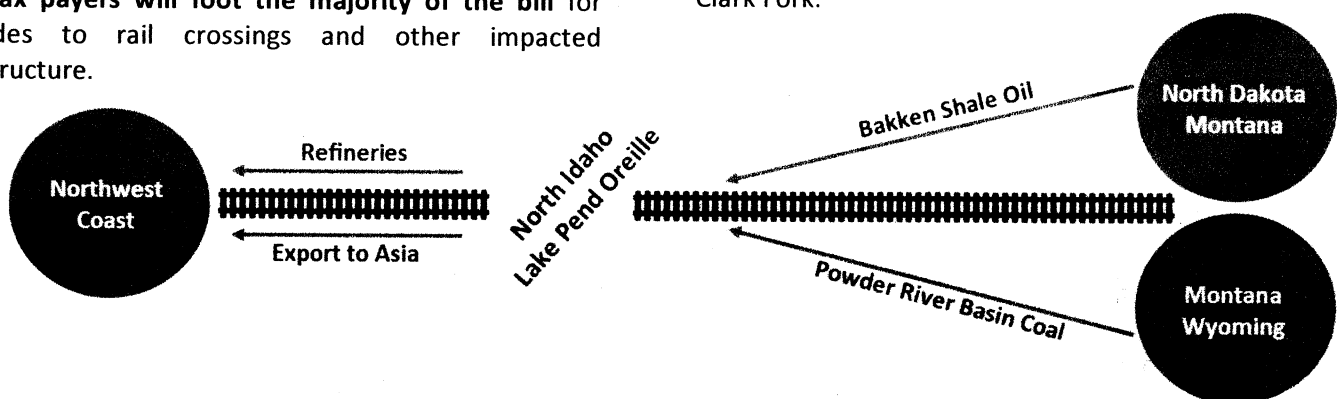

Statistics courtesy Power Past Coal and ForestEthics

Where do these fuels come from?

Coal and oil are mined from fossil fuel-rich basins across the interior of the US and Canada. Coal is primarily mined in the Powder River Basin of MT and WY, while crude oil comes from the Bakken Oil Fields of ND and MT.

Where is the coal and oil going?

Once mined, coal and crude oil are generally transported to the refineries and export facilities in coastal WA and OR. To get there, these fuels must travel by rail through North Idaho's rail-side communities, such as Sandpoint, Hope and Clark Fork.

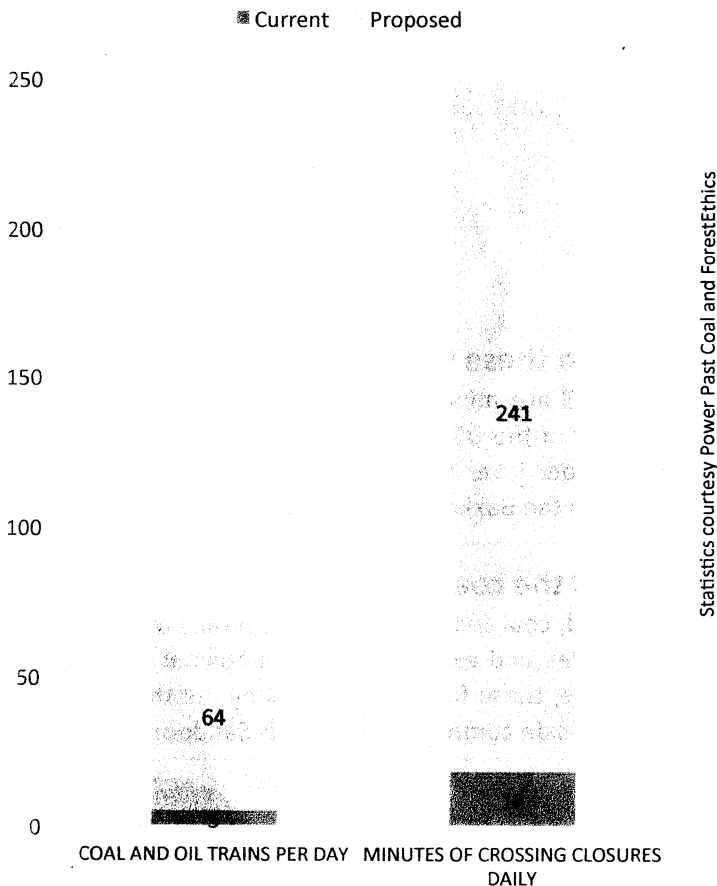

Fossil Fuels by Rail

Cumulative impacts

If shipments of both coal and oil over our regional rail system increase as proposed, this new rail traffic could have major impacts on North Idaho's communities.

Currently, between 50 and 60 trains travel over local rail lines each day. If all proposed west coast export facilities and refineries are given the green light, that number would jump to over 100 trains daily, with 64 of those carrying coal or crude oil. This huge volume increase could spell double trouble for public health and safety, air and water quality, our local economy and sensitive ecosystems like the Clark Fork River Delta.

IMPACT OF COAL AND OIL PROPOSALS

Understanding the impacts

Here are a few ways that increased fossil fuel shipments could impact North Idaho; including the effects of coal dust, diesel exhaust and doubled rail traffic.

Water Quality:

- ⇒ Increased salinity and decreased water clarity
- ⇒ Accumulation of pollutants and toxins like lead, mercury, arsenic and dangerous hydrocarbons
- ⇒ Over-all reduction in water quality

Sensitive Ecosystems:

- ⇒ Mortality of important native fish species
- ⇒ Less diversity of fish species, bugs and plants

Public Health and Safety:

- ⇒ Poorer air quality due to coal dust and toxins in diesel exhaust
- ⇒ Threats to drinking water safety from dissolved toxins
- ⇒ Increased risk of accidents

Traffic and Infrastructure:

- ⇒ Increase from 18 to 241 minutes* (4 hrs) of crossing closures daily *Statistics courtesy ForestEthics
- ⇒ Delayed emergency response due to increased crossing closures
- ⇒ Taxpayer burden to improve at-grade crossings

Economy:

- ⇒ Lower quality of life due to doubled train volume
- ⇒ Risk of catastrophic disaster like oil spill or explosion

Global Climate:

- ⇒ 53.2 billion tons* of carbon released from Bakken crude oil and Powder River Basin coal. (US annual carbon release is 5.4 billion tons)

*Statistics courtesy ForestEthics

LAKE PEND OREILLE
WATERKEEPER

Lake Pend Oreille WATERKEEPER® advocates for broad environmental reviews that study all of these potential risks, strict federal safety regulations for oil tank cars and train speeds, as well as comprehensive emergency response plans to address potential derailments of coal and oil trains. Our goal is to ensure that our watershed and its communities have a voice in determining whether proposed west coast facilities are permitted.

I oppose construction of the coal-hauling Tongue River Railroad

Building the Tongue River Railroad would enable the burning of over a billion tons of coal from the Otter Creek Tracts, posing an unacceptable risk to the climate. The draft EIS for the TRR does an insufficient job analyzing how dumping this coal on the international market would lead to increased coal consumption and delay the global transition to renewable energy. It also fails to adequately consider how additional westbound coal train traffic would affect health and safety in Western Montana rail towns. As a UM student concerned about climate change and health, I call on the Surface Transportation Board to reject the Tongue River Railroad application.

The draft EIS for the TRR does an insufficient job analyzing how dumping this coal on the international market would lead to increased coal consumption and delay the global transition to renewable energy. It also fails to adequately consider how additional westbound coal train traffic would affect health and safety in Western Montana rail towns. As a UM student concerned about climate change and health, I call on the Surface Transportation Board to reject the Tongue River Railroad application.

I oppose construction of the coal-hauling Tongue River Railroad

Building the Tongue River Railroad would enable the burning of over a billion tons of coal from the Otter Creek Tracts, posing an unacceptable risk to the climate. The draft EIS for the TRR does an insufficient job analyzing how dumping this coal on the international market would lead to increased coal consumption and delay the global transition to renewable energy. It also fails to adequately consider how additional westbound coal train traffic would affect health and safety in Western Montana rail towns. As a UM student concerned about climate change and health, I call on the Surface Transportation Board to reject the Tongue River Railroad application.

It also fails to adequately consider how additional westbound coal train traffic would affect health and safety in Western Montana rail towns. As a UM student concerned about climate change and health, I call on the Surface Transportation Board to reject the Tongue River Railroad application.

I oppose construction of the coal-hauling Tongue River Railroad

Building the Tongue River Railroad would enable the burning of over a billion tons of coal from the Otter Creek Tracts, posing an unacceptable risk to the climate. The draft EIS for the TRR does an insufficient job analyzing how dumping this coal on the international market would lead to increased coal consumption and delay the global transition to renewable energy. It also fails to adequately consider how additional westbound coal train traffic would affect health and safety in Western Montana rail towns. As a UM student concerned about climate change and health, I call on the Surface Transportation Board to reject the Tongue River Railroad application.
