Transcript:

Im calling in regards to the docket 35087 a the EJE railway acquisition with Canadian Railway. I am a concerned citizen this is going to not only double our increase of train traffic that comes through, essentially it splits our town in half in regards to emergency services. There is no proposed information from what Ive seen as far as making some improvements to help in regards to railways and any type of safety measures/traffic measures with the increased traffic coming through with these trains. I guess that's my concern because it looks like everything is being pushed through and its kind of sliding on the cusp of the bail out issue that you guys are working on. But this thing needs to be looked at closely that's one concern the other concern is that I don't think this is right for our country. This is something that good bad or indifferent another country will own a bigger portion of our railway and that's not the right thing to do especially at this time. So I'm concerned I want to make sure that this proposal does not go through this acquisition and if you have any questions or concerns please feel free to mail me information at the address provided. Thank You.
