

April 28, 2016

Dear Sir,

In regard to docket number FD 35952, I want to be sure you are aware of the natural flow of water on my property. In the Spring or after a heavy rain, water flows from my neighbor's field to the East which would be blocked by the rail line if it is built along the planned route. This would also occur on the property North of mine where a field would be totally inaccessible if the rail line is built there and farm machinery isn't allowed to cross the tracks; or it would be too dangerous to cross.

Thank you for taking all this information under consideration.
