Dear Mr. Wayland,

I write concerning the environmental
filing Docket # D 36284.

I am opposed to constructing a
Railroad pathway in the Uinta Basin,
where fracking is grossly prevalent.
Babies are being born w/ deformities or
stillborn, water is polluted, cancer rates are
high, the entire animal & human population
is diseased & chronically ill.

More pollution is the last thing we
need.

Some day when we have all renewable
clean energy & electric trains, it would be a
different story.

Together, we must support renewable
energy & care about everyone's health-people,
animals, earth. Thank-you, Jan Chamberlin
