Maureen-

The Segment 6 contract is predominantly along the ARRC mainline between the roadway underpass in Houston, extending north about three miles, and includes the wye between the main line and Millers Reach Road. The work along the right-of-way will generally be on the east (highway) side. Clearing

activities will only be done as required, and are generally less than the ARRC's 100-foot right of way on that side of the track north of the Little Susitna River. The work of primary concern relative to bird timing is Teddy Creek, which is about a quarter mile north of the bridge over the Little Susitna River. After the contract is awarded, the contract will need to submit a work plan and a schedule for review by ARRC. I expect this to be done around, if not before, Memorial Day. If we see any issues that cannot be resolved with the Contractor relating to this, or any other regulatory concern, we will let you know promptly.

Thanks,

-Brian
