November 9, 2016

To the STB Board

Since the comment period is open again and we had a chance to review the new preferred route by GLBT we are in strong opposition to the new route. This route continues to endanger the lives, livelihoods and environment of the entire area including our farm.

Our farm is an Indiana Homestead Farm. The railroad will run next to our farm shed and land lock the rest of our property from the front 10 acres. An Indian burial pot, and various Indian artifacts have been found on our farm. Our water supply may be compromised along with the tile system which drains into the West Creek. This will destroy the value of our homestead, our way of living and value of life.

Since Frank Patton and the GLBT LLC have refused to provide all the pertinent information required by STB, we feel as though the ruling from the STB should be to deny the project going forward and end the stress and anxiety it is causing the residents in all three states.

The emotional stress that has been placed on the residents, schools, businesses including farmers, should be considered and addressed.

We call upon the STB to end this now and deny GLBT project in its entirety.

Sincerely,

Eric and Frances Goetz
