Transcript:

My comment regarding the environmental impact study is that I feel that a lot of the negative impacts to our community are far under estimated in terms of the major impacts to our emergency response services. I feel the additional train noise that will be generated is far under estimated. I also feel that the increased amounts of hazardous material being transported through our community has not been properly addressed. I also feel that the potential costs to our communities to alleviate the impacts of these longer and more frequent trains has not been addressed at all. I don't feel that the taxpayers of our community should have the burden to help the fund any infrastructure improvements that should come from these needed improvements and I feel that the traffic congestion on many of our north and south roads would be far negatively impacted by these numerous trains that were never anticipated to come through these communities, specifically in New Lenex that I'm aware of and that's all I have for now. Thank you.
