Transcript:

I'm calling to still tell you, I mean since this came in to vote, July of 08 how have we had only three months for standard transportation board to check if this was good for our environment and everything else? I am an outside sales rep, I have trouble getting around my neighborhood as it is now, that I am running late to my appointments all the time and if this continues to happen there will be more trains and I'll never get to out to where I need to go. I am very upset, the Congressmen, I know it's all big greed everybody wants this, it's not gonna help our economy, it's helping Canada's economy, its helping ??? economy and it's probably helping the City of Chicago because they want it that way for those trains for the Olympics, which is upsetting me. And people mention "oh yea, they are not going to have all that noise", but is it okay to put the noise in somebody else's area? I live very close to the trains, I worry about the trains coming on to my lawn cause they will be carrying various dangerous chemicals in them and I just think more time is to need to study this. Three months is not enough time to check the impact of all what's happens. Somebody needs to be out in these areas 24 hours a day for 7 days a week to see our traffic problems and all the rest of the problem that there is. Thank you. Bye.
