I think that Volcan should consider the land owners property that they are distroying by putting a railroad across their land. Not only where does Volcan can get away with putting profit before people lives who has lived on their ancestors property most of their lives and are trying to carry on the family farm or ranch.

We need to save our farms and ranches as much as possible for the wildlife for the future generation. We also need to consider the one hundred year old Medina Dam that my Father helped build which provide water to a lot of farms. that provide food for people and animals.

Do we need a quarry over the Edwards Aquifer to pollute the water that Medina and Bexar county use as our sole water supply? Please help us keep our land and water free of pollution.

Melverda Dile
