

2) Town - wells and a neighborhood of small homes with yards of children, sandboxes, wading pools... are perilously close to Olin -

Trucks, noise, odors and airborne waste generated by the proposed transfer facility will further depress and endanger this already compromised area.

Please, please consider any alternatives you may have,

Appreciatively,

978-658-3526 Jennifer Bauma

Dear Ms. Johnson-Bull, 5/8/06 # EJ-2376

This note is written with the hopes of helping you better understand our community's concerns with the prospect of the building of a transfer station at the Olin Chemical Site.

Years of concern and suspicions regarding contamination at that site have been validated by its having recently been listed as a National Priority Superfund Site - I feel amazed development could be allowed without the area being fully investigated and its contamination better understood.
