

I oppose construction of the coal-hauling Tongue River Railroad

Building the Tongue River Railroad would enable the burning of over a billion tons of coal from the Otter Creek Tracts, posing an unacceptable risk to the climate. The draft EIS for the TRR does an insufficient job analyzing how dumping this coal on the international market would lead to increased coal consumption and delay the global transition to renewable energy. It also fails to adequately consider how additional westbound coal train traffic would affect health and safety in Western Montana rail towns. As a UM student concerned about climate change and health, I call on the Surface Transportation Board to reject the Tongue River Railroad application.

Building the Tongue River Railroad would enable the burning of over a billion tons of coal from the Otter Creek Tracts, posing an unacceptable risk to the climate. The draft EIS for the TRR does an insufficient job analyzing how dumping this coal on the international market would lead to increased coal consumption and delay the global transition to renewable energy. It also fails to adequately consider how additional westbound coal train traffic would affect health and safety in Western Montana rail towns. As a UM student concerned about climate change and health, I call on the Surface Transportation Board to reject the Tongue River Railroad application.

ATTENTION: Montana.

I oppose construction of the coal-hauling Tongue River Railroad

Inform me about meetings to:

- ☐ Support fossil fuel divestment
☐ Stop Montana coal exports

☐ Don't contact me about opportunities to fight climate change Montana

I oppose construction of the coal-hauling Tongue River Railroad

Building the Tongue River Railroad would enable the burning of over a billion tons of coal from the Otter Creek Tracts, posing an unacceptable risk to the climate. The draft EIS for the TRR does an insufficient job analyzing how dumping this coal on the international market would lead to increased coal consumption and delay the global transition to renewable energy. It also fails to adequately consider how additional westbound coal train traffic would affect health and safety in Western Montana rail towns. As a UM student concerned about climate change and health, I call on the Surface Transportation Board to reject the Tongue River Railroad application.

Inform me about meetings to:

☐ Support fossil fuel divestment

☐ Stop Montana coal exports

☐ Don't contact me about opportunities to fight climate change Montana

I oppose construction of the coal-hauling Tongue River Railroad

Building the Tongue River Railroad would enable the burning of over a billion tons of coal from the Otter Creek Tracts, posing an unacceptable risk to the climate. The draft EIS for the TRR does an insufficient job analyzing how dumping this coal on the international market would lead to increased coal consumption and delay the global transition to renewable energy. It also fails to adequately consider how additional westbound coal train traffic would affect health and safety in Western Montana rail towns. As a UM student concerned about climate change and health, I call on the Surface Transportation Board to reject the Tongue River Railroad application.
