Ken Blodgett

Dear Blodgett,

Attention of: Mr. Ken Blodgett

I expect more out of you. We now have the ability to make clean solar power (I know that this work, because my entire Montana ranch runs off of solar and wind) and the idea of moving coal through our state just to export it to Asia is unconscionable. As a scientist and a biologist, I know that we cannot continue on the path of exploitation and thoughtless consumption. Somewhere we need to take a stand and do the right thing for our children, our future, and our state. I realize that you do not have the power to stop anything, but you can see to it that the most rigorous standards are upheld.

The environmental impact statement for the proposed Tongue River Railroad should analyze the following:

Public convenience and necessity: This proposed railroad is not for the "public convenience and necessity" as required for a body to get the power of eminent domain and condemnation authority. This railroad would serve only one coal company giant, Arch Coal, which intends to sell the coal to China and other Asian countries. The public neither needs nor would be inconvenienced by this rail line. Instead, the rail line would be a disservice to the community, the region and the planet, and would cause more than minor inconveniences.

Impacts on property values: The project would devalue property and infringe on property rights. This railroad would cause fires, spread invasive weeds, devalue property (especially riverfront property), make ranching and farming more difficult and expensive, split ranch land in half and separate fields from the river, and shift the liability of train crossings to the landowner.

Wildlife: The Tongue River Valley is rich in wildlife habitat and home to outstanding elk and mule deer populations as well as upland birds. Industrializing this valley with a railroad and the coal strip mine it serves would seriously degrade this excellent sportsman's resource.

Flooding: The railroad bed would act as an earthen dam and potentially worsen the flooding problems now experienced in Miles City in the

winter with ice jams.

Noise: The loud trains would ruin the quiet enjoyment of recreation areas near Miles City.

Infrastructure, traffic and safety: Taxes would go up for residents in communities along the rail lines as the coal heads to coastal ports for shipment. The proposed railroad would increase coal train traffic substantially causing traffic delays, noise, diesel pollution and safety issues at crossings. Coping with the increased traffic would require expensive over passes and safety crossing which are paid for primarily by local taxpayers.

Greenhouse gas and diesel pollution: The Tongue River Railroad would allow publicly owned coal that should stay in the ground to be burned in Chinese and other Asian countries' dirty power plants and will fuel intolerable, decades-long increases in carbon dioxide emissions. The greenhouse gas costs of Otter Creek coal go far beyond just burning the coal. It must be mined, hauled by trains fueled by diesel to West Coast terminals, shipped overseas by ships fueled by diesel, and then hauled in Asia to the plants. Increased mercury deposition from Asian coal fired plants will also impact those who catch and eat fish in Montana and other western states.

Sincerely,

Pam Knowles
