

Dave Navecky, Surface Transportation Board,

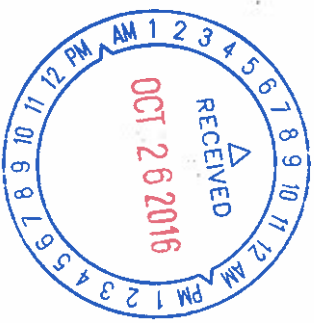

We are opposed to the Great Lakes Basin Transportation Docket No FD35952. These trains will impact our community, the wet lands, quality of air, noise, vibration (We live in a small subdivision about 1/2 mile from proposed tracks), property values, plants, animals (farm, pets, + wild), business's, wells being contaminated by hazardous spills. What do we do for drinking water. We can't drill a new well. Who will train first responders if there is a hazardous spill?

There is the implication of upto 5 tracks and 110 trains a day. The closing of east/west and north/south roads for train crossing will impact children from getting to/from school, people getting to work, shopping doctors + hospitals.

This is a Toll Railroad. We don't think it should go forward in any Co. in Illinois Indiana, or Wisconsin. We have heard of no one who wants this railroad. It is very hard for the small individual to fight big money so we hope you will help our fight.

Thank you,
Karen Kosinski
