Submission Text

I'm from E MT and very familiar with the area and the need for economic development rather than more handouts to the reservations. This rail line and resource development needs to continue in eastern Montana. There are enough environmental regulations in place to ensure good stewardship of the land. The extensive EIS portions on "climate change" are perpetuating lies - get real and look at the faulty data. If this is a required portion of EIS reports now, shame on the EPA and this administration for continuing to propagate lies. This part of the country needs jobs and the US needs to return to productivity.
