Washington, DC 20423
ATTN: Office of Environmental Analysis
Docket No. 30186

Dear Mr. Blodgett,

I am writing to comment on the Draft EIS for the Tongue River Railroad in eastern Montana. The demand for coal in the United States is declining and will continue to decline as greenhouse gas and climate change become an ever greater concern. Arch Coal intends to sell its coal to Asia. The demand in Asia may exist now, but is not likely to persist for very long. It makes no sense to destroy a productive agricultural valley here in the United States so that Asian countries can continue to emit greenhouse gases that harm all of us. The proposed Tongue River Railroad will result in increased train traffic through my neighborhood in Missoula. We do not want any more noise or coal dust or blocked railroad crossings than we have already. Arch Coal should not be allowed to condemn private land in Montana when it benefits only their company and Asian countries. Please choose the No-Action alternative. Thank you for considering my comments.

Regards,

A handwritten signature in black ink, appearing to read "Peter Lesica". The signature is fluid and cursive, with the first name "Peter" and last name "Lesica" clearly distinguishable.

Peter Lesica

Docket No. 30186

Mr. Blodgett:

Please accept the following written comments that regard the Surface Transportation Board Draft EIS on the proposed Tongue River Railroad.

Sincerely,

John Woodland
580 Riverbend Rd.
Superior, MT 59872

Testimony For Surface Transportation Board – Tongue River Railroad

My name is John Woodland and I am a resident of Superior MT. I recently retired after 9 years as Superior's fire chief. I speak for myself, not my former employer.

Superior is on the rail line currently carrying coal and will experience a major increase in traffic from this proposal. Derailments in our area are not uncommon due to the mountainous terrain: One that dumped cargo into the Clark Fork River was visible from my home, another just a few miles to the east dumped aircraft fuselages into the river.

My fire district includes a number of rail crossings. One includes a passing siding that blocks the only road into a sizable subdivision when in use. In many cases, water supply for a fire would require a tender shuttle across the tracks. In most cases, a single blocked crossing blocks all practical access to large groups of homes. Some of these crossings have lights and cross arms, and some just have warning signs. I have personally sat at a crossing waiting for a train while on an emergency response.

If the Tongue River Railroad is built, it will substantially increase the rail traffic in our district. This will increase the frequency that emergency responses are delayed by trains. No doubt there will also be an increase in derailments. There are, of course fixes in the form of overpasses but these costs will fall primarily on poor communities that can't afford them while much of the profit from Otter Creek goes to wealthy out of state interests.

If the Tongue River Railroad is built, the frequency of emergency responses for my community and every other community in Montana will also increase as a result of the additional carbon this project will pump into the atmosphere. With this increase will come increasing conflicts at the crossings.

It is no secret that fire seasons are getting longer and extreme weather events are becoming more frequent. Science has made the link between this and climate change. When I was hired, I was told the department experienced around 25 calls a year. When I retired, the numbers were over 40. This is another one of those burdens being caused by projects like Tongue River and Otter Creek with the cost shifted to local communities and ignored by your EIS.

I call on the Surface Transportation Board to consider and address the real costs resulting delayed responses to emergency calls, the increased volume of calls caused by climate change and fair cost sharing for upgrades to crossings. You have dismissed climate impacts based on the far fetched position that if this coal goes to market, other sources will remain in the ground. That is a ludicrous assumption that you have not justified.

John Woodland
580 River Bend Rd.
Superior, MT 59872

May 11, 2015

To: Service Transportation Board

Tonight, a movie called "Coal Road to China" was shown in our Sandpoint Community Hall. People here are very concerned about increased train traffic here. In Sandpoint Idaho we already experience about 50 trains a day with their noise and delays - often 10 or even 20 minutes or longer, potentially life threatening when emergencies are happening, and their polluting diesel dust. Another issue that worries us is the potential for disastrous derailings which are happening more & more. Our water & air not to mention our livelihood could be seriously impaired or destroyed. And what about the serious health issues, caused by the engines & coal dust especially dangerous to seniors & children.

Please choose 'no Action' as your response to the draft EIS. The dangerous chemicals released when coal is burned affects us all. Leave the carbon in the ground. Please, Thank you,

Sharon Burdick

-----------------------	-----------------------------	--	--------------	-------

Dear Surface Transportation Board,

I oppose the construction of the Tongue River Railroad and urge you to reject this misguided project. The draft EIS released on April 17th does an inadequate job considering harmful impacts on Western Montana rail towns that will see additional coal train traffic if the TRR and West Coast export terminals are built. In addition, new carbon emissions that would result from building the TRR mean the project should be rejected on climate change grounds alone.

I am especially concerned about:

- *Quality of life in rail line communities affected by noise pollution.*
- *Air quality in neighborhoods right next to the rail line (where highly localized impacts will be more severe than on any given town's air shed considered as a whole).*
- *Climate change caused by burning coal that would be transported on the TRR.*
- *Private property rights infringement and degradation of farmland in rural Montana.*
- *Other: toxic coal dust health effects and traffic congestion.*

Additional comments:

Agricultural lands already are contaminated with persistent organic pollutants as recognized by the World Health Organization. Dioxins and dioxin like substances contaminate the entire biosphere. Food and air contamination from coal dust will lead to increased cancer rates among consumers of Montana's foods and communities near rail road are more susceptible to carcinogenic effects of coal dust. Montana's water must be protected for the general welfare of Montanans and global residents because water contamination of any ground water aquifer will cause river contamination through seepage and will affect all communities or all organisms down-stream and ocean life. The value of Montana's agricultural product will diminish as will the value of all industries associated with water use because the water will be contain greater levels of carcinogenic or toxic substances. I urge the Surface Transportation Board to cho0se NO-ACTION on developments of Tongue River Railroad because ethical considerations, comprehensive public sentiment for all Montanans and understanding the full implications merit years more of research and I am opposed to Tongue River Railroad developments, I will explain a few of the myriad of reasons why I am opposed in statements below. In recent times Montanans, including myself, have been concerned with political corruption and this fear is compounded by the failure of Surface Transportation Board and other governing organizations to conduct adequate research into the public response to the Tongue River Railroad and coal mining project. I suspect Missoula was overlook for having a meeting with the public because the Surface Transportation Board wants to ignore the contestation Missoulians pose to the Tongue River Railroad developments.

David Browder	davidbrowder@gmail.com		Missoula, MT	
<i>Dear Surface Transportation Board,</i> <i>I oppose the construction of the Tongue River Railroad and urge you to reject this misguided project. <i>I am especially concerned about:</i> • Quality of life in rail line communities affected by noise pollution. • Air quality in neighborhoods right next to the rail line (where highly localized impacts will be more severe than on any given town's air shed considered as a whole). • Climate change caused by burning coal that would be transported on the TRR. • Other: impacts further down the rail corridor.				
<i>Additional comments:</i> As a Washington resident who has observed coal trains running alongside our most important waterways--Columbia River and Puget Sound, I oppose the use of Washington port areas for coal transshipment abroad, and therefore, the transport of additional trains from Montana to Washington (and Oregon).				

Anderson Cagle	andycagle@hotmail.com	4068905079	Eureka, MT	59917
<i>Dear Surface Transportation Board,</i> <i>I oppose the construction of the Tongue River Railroad and urge you to reject this misguided project. The draft EIS released on April 17th does an inadequate job considering harmful impacts on Western Montana rail towns that will see additional coal train traffic if the TRR and West Coast export terminals are built. In addition, new carbon emissions that would result from building the TRR mean the project should be rejected on climate change grounds alone.</i>				
<i>I am especially concerned about:</i> Climate change caused by burning coal that would be transported on the TRR.				
<i>Additional comments:</i> 1. Approval of this railroad will facilitate development of a new coal export mine, we must not permit new coal mines if we are to keep global warming below the 2c limit agreed to under the United Nations. 2. Exporting thermal coal to Asia results in the death of hundreds of thousands of Chinese annually. These deaths occur after the thermal coal is burnt in China where particulate emissions (pm2.5) normally exceed WHO standards, many other aerosol and gaseous emissions come from this thermal coal that harm human health. 3. It's hard to know what else you need to hear to deny a railroad project that will facilitate one of the largest coal export mines in USA. The fact that US government even entertains the idea of permitting the export of massive amounts thermal coal to facilitate development of sweatshops in Asia when average global carbon dioxide levels are now >= 400ppm is astounding. The fate of Holocene climate is in your hands, please make a statement and deny this project based on it's downstream climate impacts. best regards, Andy Cagle

In addition, new carbon emissions that would result from building the TRR mean the project should be rejected on climate change grounds alone.</i>				
<i>I am especially concerned about:</i>				
<i>Additional comments:</i> I am not opposed to coal when used in some type of efficient manner, BUT, sending it across the ocean to burn in an older generation Chinese power plant and then have it come back over the ocean in the jet stream, doesn't make a lot of sense. Perhaps a better plan could be developed.

Stop the Tongue River Railroad Coal Project

Dear Surface Transportation Board,

I oppose the construction of the Tongue River Railroad and urge you to reject this misguided project. The draft EIS released on April 17th does an inadequate job considering harmful impacts on Western Montana rail towns that will see additional coal train traffic if the TRR and West Coast export terminals are built. In addition, new carbon emissions that would result from building the TRR mean the project should be rejected on climate change grounds alone. I am especially concerned about the TRR's impacts on:

- ☐ Quality of life in rail line communities affected by noise pollution.
- ☐ Air quality in neighborhoods right next to the rail line (where highly localized impacts will be more severe than on any given town's air shed considered as a whole).
- ☒ Climate change caused by burning coal that would be transported on the TRR.
- ☒ Private property rights infringement and degradation of farmland in rural Montana.

Additional comments: Stop selling coal internationally

I oppose the construction of the Tongue River Railroad and urge you to reject this misguided project. The draft EIS released on April 17th does an inadequate job considering harmful impacts on Western Montana rail towns that will see additional coal train traffic if the TRR and West Coast export terminals are built. In addition, new carbon emissions that would result from building the TRR mean the project should be rejected on climate change grounds alone. I am especially concerned about the TRR's impacts on:

- ☒ Quality of life in rail line communities affected by noise pollution.
- ☒ Air quality in neighborhoods right next to the rail line (where highly localized impacts will be more severe than on any given town's air shed considered as a whole).
- ☒ Climate change caused by burning coal that would be transported on the TRR.
- ☒ Private property rights infringement and degradation of farmland in rural Montana.

Stop the Tongue River Railroad Coal Project

Dear Surface Transportation Board,

I oppose the construction of the Tongue River Railroad and urge you to reject this misguided project. The draft EIS released on April 17th does an inadequate job considering harmful impacts on Western Montana rail towns that will see additional coal train traffic if the TRR and West Coast export terminals are built. In addition, new carbon emissions that would result from building the TRR mean the project should be rejected on climate change grounds alone. I am especially concerned about the TRR's impacts on:

- ☒ Quality of life in rail line communities affected by noise pollution.
- ☒ Air quality in neighborhoods right next to the rail line (where highly localized impacts will be more severe than on any given town's air shed considered as a whole).
- ☒ Climate change caused by burning coal that would be transported on the TRR.
- ☐ Private property rights infringement and degradation of farmland in rural Montana.

Dear Surface Transportation Board,

I oppose the construction of the Tongue River Railroad and urge you to reject this misguided project. The draft EIS released on April 17th does an inadequate job considering harmful impacts on Western Montana rail towns that will see additional coal train traffic if the TRR and West Coast export terminals are built. In addition, new carbon emissions that would result from building the TRR mean the project should be rejected on climate change grounds alone. I am especially concerned about the TRR's impacts on:

- ☒ Quality of life in rail line communities affected by noise pollution.
- ☐ Air quality in neighborhoods right next to the rail line (where highly localized impacts will be more severe than on any given town's air shed considered as a whole).
- ☒ Climate change caused by burning coal that would be transported on the TRR.
- ☒ Private property rights infringement and degradation of farmland in rural Montana.

Dear Surface Transportation Board,

I oppose the construction of the Tongue River Railroad and urge you to reject this misguided project. The draft EIS released on April 17th does an inadequate job considering harmful impacts on Western Montana rail towns that will see additional coal train traffic if the TRR and West Coast export terminals are built. In addition, new carbon emissions that would result from building the TRR mean the project should be rejected on climate change grounds alone. I am especially concerned about the TRR's impacts on:

- ☒ Quality of life in rail line communities affected by noise pollution.
- ☒ Air quality in neighborhoods right next to the rail line (where highly localized impacts will be more severe than on any given town's air shed considered as a whole).
- ☒ Climate change caused by burning coal that would be transported on the TRR.
- ☒ Private property rights infringement and degradation of farmland in rural Montana.
