Subject: Tongue River DEIS

Hello

I'm a Missoula, Montana area resident working with the Missoula County Air Quality Advisory Council in reviewing the Tongue River Railroad DEIS.

To make our review of the document from a more informed position, we would like to have a better understanding of potential increased rail traffic through Missoula. Under the maximum development scenario for Tongue River area coal an increase of 18.6 trains per day (9.3 each way) is expected along the "northern route." How many of these trains would come through Missoula?

An additional help to us would be a knowledge about how many coal trains currently come through Missoula. Do you know where we can get that information?

We'll be grateful for your help!

Gary Matson
