EI-26701

Hello

I ask the scoping period for this project be extended by 30 additional days because the public has largely been shut out of the process by the CIB and the SCIC who have provided the public with little of the information necessary to meaningfully participate in the environmental study process.

I also ask that the cumulative impact of induced growth in the carbon intensive Tar Sands and oil shale strip mining in the Uintah Basin caused by the availability of railroad transport be analyzed in the EIS.

What impact to rare flowers?

What impact to future generations?

Regards

Lionel Trepanier , and for
Utah Tar Sands Resistance at gmail
