Submission Text

Dear Board Members, 95% of the world scientists say that if we don't reduce overall carbon in the atmosphere-we are on course to possible extinction of our species! Please, you **MUST** consider the cumulative environmental impacts of this project. The world is getting off of burning coal and all fossil fuels. We are at a time when we must rapidly transition to clean renewable energy- our future and especially the future for our children depends on it. The consequences of climate change are occurring faster than we thought. We must change! Respectfully, Debra E. McGee
