CN-WC Integration reporting**AVERAGE TERMINAL DWELL TIME****Definition**

Average Terminal Dwell Time is the average time a car spends within an operating yard from arrival to departure. Measurement of the car dwell time starts with the arrival of the car at the operating yard as a result of a train arrival, transfer from a satellite yard, or interchange received event. The measurement of car dwell within the operating yard stops with the departure of the car as a result of a train departure, transfer to another yard, or interchange delivered event. Excluded from the terminal dwell measures are cars placed in hold, constructive placement, bad order, and stored status following their arrival and prior to their departure from the operating yard.

The figures below are expressed in hours.
