Mr. Lund,

I am following up on an email you sent to the project email address for the Uinta Basin Railway Draft Environmental Impact Statement. In answer to your question, we are not aware of any plans for passenger service on the proposed rail line. According to the Seven County Infrastructure Coalition, the project applicant, the proposed rail line would primarily be used to transport crude oil from the Uinta Basin to markets across the United States. Other products, potentially including frac sand, machinery, or mineral or agricultural commodities, could also move on the rail line.

I hope this information is helpful. Please feel free to reach out if you have additional questions or to provide comments on the Draft EIS. Thank you for your interest in this environmental review.

Regards,

Josh Wayland

Subject: Passenger trains

Hello,

Does the Uinta Basin Railway have current or future or contingency plans to allow for passenger train traffic?

Regards,

Tom Lund
