Subject: Revised MSO and Barneby ridge-crest reports uploaded to SharePoint

Kevin,

The Mexican spotted owl and Barneby ridge-crest habitat reports have been revised as requested and posted to the STB NEPA File SharePoint (Documents>General> Biology Habitat Technical Memoranda July 2020>Revised per STB comments): [REDACTED]

The Mexican spotted owl report now includes a map that showing the locations of the four general habitat regions (Figure 4). In the Barneby ridge-crest report, Section 4.0 has been revised to clarify the two types of potential habitat.

GIS updates are limited to providing boundaries for the requested MSO Habitat Regions and these data have been posted in the GIS folder for these reports (Documents>General> Biology Habitat Technical Memoranda July 2020>GIS Files): [REDACTED]

Hi Kevin,

We have reviewed the habitat memoranda and have just a couple of quick follow up questions/requests.

For the Mexican Spotted Owl Memorandum: Please provide a new map in the final report or add to one of the existing maps to show the general boundaries or limits of the four regions for which the results are described (Argyle Canyon Region, Indian Canyon Region, Wells Draw Region, and Emma Park Regions). It would also be helpful to have GIS data showing these general boundaries.

For the Barneby Ridge-cress Memorandum: The report describes two habitat types—white shale habitat and pinyon-juniper habitat. White shale habitat is a subset of pinyon-juniper habitat. Please clarify how the results in Table 1 were calculated, given the overlap between the two habitat types. Do the pinyon-juniper habitat area calculations include the white shale habitat area and, if so, is this double counting appropriate?

Thanks, Kevin, and please feel free to call me if you'd like to talk through these comments.

Best,
Josh
